

Carbon Reduction Plan

Our Company Commitment to achieving Net Zero

Egton Medical Information Systems Limited aims to achieve a 90% reduction in Scope 1 and 2 emissions reduction by 2030, with a commitment to achieve net zero across all scopes by 2040.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2023	
Additional Details relating to the Baseline Emissions calculations.	
Egton Medical Information Systems Limited's UK emissions are as quoted below.	
Baseline year emissions:	
EMISSIONS	TOTAL (mtCO₂e)
Scope 1	733
Scope 2	Market-based ¹ 28 Location-based 707
Scope 3 (Included Sources)	1,203 Upstream Transportation and Distribution: 231 Waste Generated in Operations: 56 Business Travel: 532

¹ This covers the emissions associated with the use of electric vehicles across the business. All other owned and operated facilities across Egton Medical Information Systems Limited have certified REGO electricity contracts in place.

	<p>Employee Commuting: 384</p> <p>Downstream Transportation and Distribution: 0</p> <p><i>In accordance with the Greenhouse Gas Protocol, emissions from transportation and distribution services are reported in Scope 3 category 4 (upstream transportation and distribution).</i></p>
Total Emissions	1,963 ²

Current Emissions Reporting

Reporting Year: 2025	
EMISSIONS	TOTAL (mtCO ₂ e)
Scope 1	242
Scope 2	<p>Market-based 6</p> <p>Location-based 380</p>
Scope 3 (Included Sources)	<p>861</p> <p>Upstream Transportation and Distribution: 8</p> <p>Waste Generated in Operations: 11</p> <p>Business Travel: 817</p> <p>Employee Commuting: 25</p> <p>Downstream Transportation and Distribution: 0</p> <p><i>In accordance with the Greenhouse Gas Protocol, emissions from transportation and distribution services are reported in Scope 3 category 4 (upstream transportation and distribution).</i></p>
Total Emissions ^[3]	1,109

² The total UK Scope 1-3 emissions figure provided takes into account market-based Scope 2 emissions reflecting the presence of renewable energy.

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets:

- 90% reduction in Scope 1 and 2 emissions by 2030
- 90% reduction in Scope 3 emissions by 2040

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2023 baseline. Referencing the emissions categories above, a gross emissions saving of 854mtCO₂e, a 44% reduction against the 2023 baseline (Scope 1-3 emissions), has been achieved in part due to measures such as reduced refrigerant leakage, organic changes and reductions in the Egton portfolio, a shift to less greenhouse gas intensive purchasing, lower levels of upstream transportation and distribution and a significant increase in fleet vehicle electrification which, as at December 2025, stood at 98% electric vehicles. Employee commuting data changed in 2025 due to the application of a different methodology in comparison to previous years, with insights now based on office utilisation frequency. These measures will be in place when performing the contract.

A net emissions saving of 22mtCO₂e, a 79% reduction against the 2023 baseline in Scope 2 (market-based emissions) has occurred due to the continued purchasing of REGO certificates for Egton Medical Information Systems Limited's owned and operated facilities.

Where Scope 3 emissions have increased, this is largely attributable to increases in business travel.

Products and Services:

Egton Medical Information Systems Limited continues to support its customers' objectives to reduce their carbon footprint with digital alternatives to original paper-based processes. This includes:

- o electronic prescription request service between GP practices and pharmacies.
- o patient repeat prescription requests via Patient Access.

- facilitation of digital consultations through integrated telephony and video, which has reduced or eliminated patients' need to travel.

Furthermore, products and services pass through a sustainability pillar before development can commence, as part of the Well Architected Framework, with employees receiving training and adhering to ongoing design requirements prioritising efficiency and reduced energy consumption.

Operations and Assets:

- Egton Medical Information Systems Limited's fleet policy requires that all company cars will be fully electric by 2026. By the end of 2025, a total of 98% of the fleet was made up of fully electric vehicles.
- All Egton Medical Information Systems Limited owned offices are contractually supplied with 100% renewable energy.
- Electric vehicle charging points were, and continue to be where relevant, available for employee use at the owned Leeds locations.

Operational efficiencies relating to buildings are being further explored to generate the requisite reductions.

Supply Chain:

Following the launch of Egton Medical Information Systems Limited's Supplier Code of Conduct in 2023, it collaborated with its largest suppliers to learn more about their sustainability efforts through an assessment process designed to map the maturity of each supplier's sustainability journey. 2025 saw continued direct collaboration with some of its key suppliers, which has included delivering a programme of education for its technical product staff to drive efficiency in design. Supply chain engagement enables Egton Medical Information Systems Limited to promote collaboration and sharing of best practice to encourage tracking, reporting and reduction of the carbon footprint of its supply chain. The recent acquisition of Egton Medical Information Systems Limited by TPG in 2026 means that procurement practices and supplier engagement will continue to evolve and develop over time.

Accreditation:

- Egton Medical Information Systems Limited is ISO14001 Environmental Management System certified across a number of UK sites.

Future carbon reduction initiatives

In the future, our goal is to achieve net-zero greenhouse gas emissions in Egton Medical Information Systems Limited's operations and value chain through steady, measurable improvement with a target date of 2040. We hope to do so through:

- Continual, long-term reduction in our directly and indirectly owned and controlled greenhouse gas emissions.
- A sustainable supply chain that enables our sustainability goals.
- Everyone at Egton Medical Information Systems Limited taking personal responsibility for reducing their carbon emissions, and;
- Driving continuous improvement in the decarbonisation of our products and service.

The following proposed carbon reduction projects will allow Egton Medical Information Systems Limited to deliver the above (the company will continue to review and assess its approach, remaining responsive to innovation, emissions data improvements, and market and infrastructure developments):

- Developing its transition plan, anchored in science-based targets.
- Migration of data centres to the cloud.
- Collaborating with its value chain to produce more accurate operational and product emissions data.
- Gathering value chain commitment to carbon reduction strategies.
- Buildings energy efficiencies through consolidation.
- 100% of company cars to be electric in 2026.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate [Government emission conversion factors for greenhouse gas company reporting](#).

Egton Medical Information Systems Limited

Fulford Grange,
Micklefield Lane,
Rawdon, Leeds LS19
6BA.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Egton Medical Information Systems Limited:

.....
Paul Marriott, CEO
